Initial Proposal

Description

Development of an application for Virtual Tours in the Museum

The application will provide an interactive **map** of the whole Museum. The visitors will use this map to guide the Virtual Navigator application to the Museum's Room that they wish to visit, and then see the **exhibits** they are interested in. The exhibits will be presented in the form of a blog, using Web interfaces. Each visitor will be able to seek and find individual exhibits using query interfaces. The visitors will be able to leave **comments and grades** about the contents, as well as to perform context-sensitive searches. Therefore, the following goals will be achieved:

- **Easy access** to the contents.
- Informing of the public, with the aid of blogs.
- Visitor **preferences** identification.
- Creation of visitor communities.
- **Statistical analysis** of the exhibits' visiting patterns.
- Easy update/entry with new content.

Aiming to improve the visiting' experience, the visitors will be able to respond to a short anonymous survey. Their opinions will be collected and will be made available for processing. For this analysis, techniques such as factor analysis ([http://en.wikipedia.org/wiki/Factor analysis](http://en.wikipedia.org/wiki/Factor_analysis)) will be employed.

Goals

The goal of this task is the design and development of a software application, which will be finally installed in **infokiosks**, in desktop PCs; this application will allow for virtual tours to the Museum's wings (as well as to findings which are not currently exhibited), and to the **excavation sites**.

The application will draw information from the repository (developed in Task 2.1), and will be the basis for the creation of the Virtual Tours Projection Room (of Task 3.3).

The application will be fully compatible with current Web, Internet and Intranet standards.

User eXperience Goals

- A Virtual Wing is not a traditional Web Application ...
 - Traditional controls are:
 - Hard to use for the non-pc user
 - Too small for touch screen
 - Ugly?
- A Virtual Wing must not “look like” a Web Site (already tried that, look ugly)

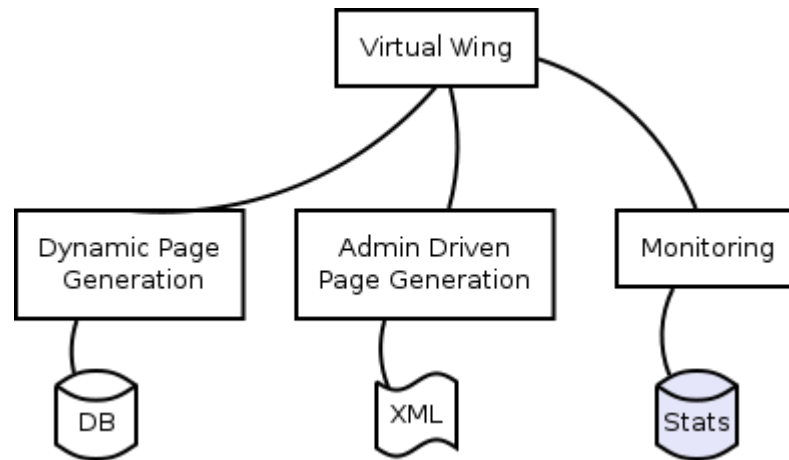

User eXperience Goals

- ...we take into account:
 - Touch
 - Big Controls
 - Do not overcrowd screen
 - Few clicks
 - Photoplay style
 - Consistency

Architecture

Abstract GUI

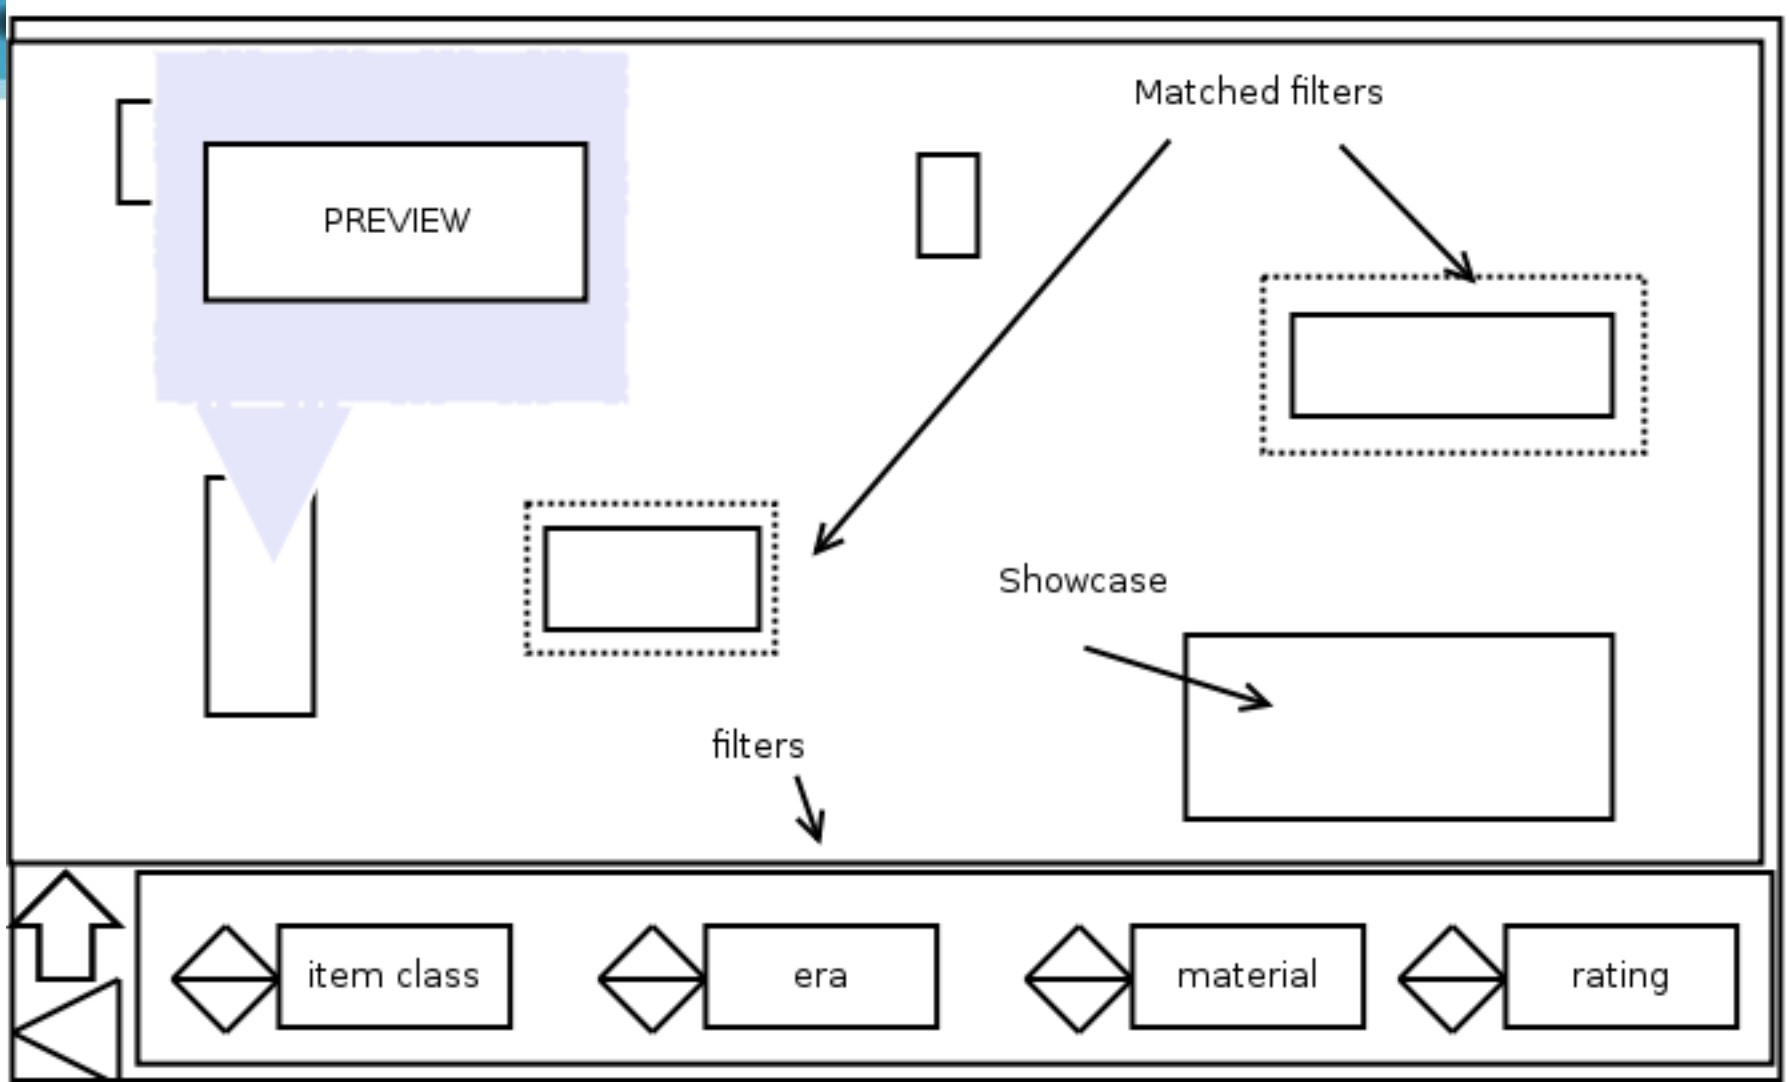

Abstract GUI

Abstract GUI

Abstract GUI

GuestBook

- Blog like site, at the exit of the museum, or at the end of a Virtual Wing tour.
- Users may leave comments, read comments, and reply to comments
- Could replace traditional book

Questionnaires

- Usability:
 - Navigation, clicks, previews, thumbnails, consistency
- Content:
 - Intelligible, correctly grouped, filtering, related content, erroneous info
- Learn:
 - Smth new, useful, interesting, amusing
- Reliability:
 - Crashes, unexpected behavior
- Aesthetics:
 - Consistency, colors, css
- General:
 - Visit again, suggest to friends

Work

- Design Generic Controls (tiles like)
- CSS (consistency)
- Put things together (message passing)

Needs

- Hardware specifications ? Especially screen resolution!
- Early feedback
